2-1. Rental Fact Table

Table	Column	Data Type	Description
<i>Rental</i> <u>Fact table</u>	<i>rental_id</i>	SERIAL	Primary Key (Surrogate Key) , Identity auto increment column for the rental records.
	<i>rental_date</i>	TIMESTAMP (6)	Date and time when a film was rented at. Formatted as (YYYY-MM-DD HH:mm:ss). Does not include the time zone.
	<i>inventory_id</i>	INTEGER	Foreign Key to <i>inventory</i> table. A whole number which a film is stocked in the inventory by.
	<i>customer_id</i>	SMALLINT	Foreign Key to <i>customer</i> table. A whole number assigned to a customer as their ID
	<i>return_date</i>	TIMESTAMP (6)	Date and time when a film was returned at. Formatted as (YYYY-MM-DD HH:mm:ss). Does not include the time zone.
	<i>staff_id</i>	SMALLINT	Foreign Key to <i>staff</i> table. A whole number assigned to the employee who rented the film.
	<i>last_update</i>	TIMESTAMP (6)	Date and time when the <i>rental</i> table was updated at. Formatted as (YYYY-MM-DD HH:mm:ss). Does not include the time zone. It shows the same time for all records.

2-2. Category Dimension Table

Table	Column	Data Type	Description
<i>Category</i> <u>Dimension</u>	<i>category_id</i>	SERIAL	Primary Key (Surrogate Key) , Identity auto increment column for the category records.
	<i>name</i>	CHARACTER VARYING (25)	Name of the film category. Must not exceed 25 characters.
	<i>last_update</i>	TIMESTAMP (6)	Date and time when the <i>category</i> table was updated at. Formatted as (YYYY-MM-DD HH:mm:ss). Does not include the time zone. It shows the same time for all records.

2-3. Actor Dimension Table

Table	Column	Data Type	Description
<i>Actor</i> <u>Dimension</u>	<i>actor_id</i>	SERIAL	Primary Key (Surrogate Key) , Identity auto increment column for the actor records.
	<i>first_name</i>	CHARACTER VARYING (45)	First name of the actor. Must not exceed 45 characters.
	<i>last_name</i>	CHARACTER VARYING (45)	Last name of the actor. Must not exceed 45 characters.
	<i>last_update</i>	TIMESTAMP (6)	Date and time when the <i>actor</i> table was updated at. Formatted as (YYYY-MM-DD HH:mm:ss). Does not include the time zone. It shows the same time for all records.

2-4. Address Dimension Table

Table	Column	Data Type	Description
<i>Address</i> <u>Dimension</u>	<i>address_id</i>	SERIAL	Primary Key (Surrogate Key) , Identity auto increment column for the address records.
	<i>address</i>	CHARACTER VARYING (50)	First street address line. Must not exceed 50 characters.
	<i>address2</i>	CHARACTER VARYING (50)	Second street address line. Must not exceed 50 characters.
	<i>district</i>	CHARACTER VARYING (20)	Name of the district. Must not exceed 20 characters.
	<i>city_id</i>	SMALLINT	Foreign Key to <i>city</i> table. A unique identification number for the city.
	<i>postal_code</i>	CHARACTER VARYING (10)	Postal code for the street address. Must not exceed 10 characters.
	<i>phone</i>	CHARACTER VARYING (20)	Telephone number identification number. Must not exceed 20 characters.
	<i>Last_update</i>	TIMESTAMP (6)	Date and time when the <i>address</i> table was updated at. Formatted as (YYYY-MM-DD HH:mm:ss). Does not include the time zone. It shows the same time for all records.

2-5. City Dimension Table

Table	Column	Data Type	Description
<i>City</i> <u>Dimension</u>	city_id	SERIAL	Primary Key (Surrogate Key) , Identity auto increment column for the city records.
	city	CHARACTER VARYING (50)	Name of the city. Must not exceed 50 characters.
	country_id	SMALLINT	Foreign Key to <i>country</i> table. A unique identification number for the country.
	last_update	TIMESTAMP (6)	Date and time when the <i>city</i> table was updated at. Formatted as (YYYY-MM-DD HH:mm:ss). Does not include the time zone. It shows the same time for all records.

2-6. Country Dimension Table

Table	Column	Data Type	Description
<i>Country</i> <u>Dimension</u>	country_id	SERIAL	Primary Key (Surrogate Key) , Identity auto increment column for the country records.
	country	CHARACTER VARYING (50)	Name of the country. Must not exceed 50 characters.
	last_update	TIMESTAMP (6)	Date and time when the <i>country</i> table was updated at. Formatted as (YYYY-MM-DD HH:mm:ss). Does not include the time zone. It shows the same time for all records.

2-7. Film Dimension Table

Table	Column	Data Type	Description
<i>Film</i> <u>Dimension</u>	<i>film_id</i>	SERIAL	Primary Key (Surrogate Key) , Identity auto increment column for the film records.
	<i>title</i>	CHARACTER VARYING (255)	Title of the film. Must not exceed 255 characters.
	<i>description</i>	TEXT	Text field for the description of film
	<i>release_year</i>	year	Year the film was released in
	<i>language_id</i>	SMALLINT	Foreign Key to <i>language</i> table. A unique identification number for the language of film which actors speak in.
	<i>rental_duration</i>	SMALLINT	Number of days which the film got rented by the customer
	<i>rental_rate</i>	NUMERIC (4,2)	Cost of renting the film with two decimal numbers.
	<i>length</i>	SMALLINT	Duration of the film
	<i>replacement_cost</i>	NUMERIC (5,2)	Cost of replacing the film in case of being lost or broken with two decimal numbers.
	<i>rating</i>	Mpaa_rating	Rate of the film in Motion Picture Association Rating System
	<i>last_update</i>	TIMESTAMP (6)	Date and time when the <i>film</i> table was updated at. Formatted as (YYYY-MM-DD HH:mm:ss). Does not include the time zone. It shows the same time for all records.
	<i>special_features</i>	TEXT []	Explains some bold features which is include in the film like Trailers, Behind the scenes, Deleted scenes, ...
	<i>fulltext</i>	TSVECTOR	Some sorted text elements which improve searching the title of the film

2-8. Customer Dimension Table

Table	Column	Data Type	Description
<i>Customer</i> <u>Dimension</u>	<i>customer_id</i>	SERIAL	Primary Key (Surrogate Key) , Identity auto increment column for the customer records.
	<i>store_id</i>	SMALLINT	Foreign Key to <i>store</i> table. A unique identification number for the store.
	<i>first_name</i>	CHARACTER VARYING (45)	First name of the customer. Must not exceed 45 characters.
	<i>last_name</i>	CHARACTER VARYING (45)	Last name of the customer. Must not exceed 45 characters.
	<i>email</i>	CHARACTER VARYING (50)	Email address of the customer. Must not exceed 50 characters.
	<i>address_id</i>	SMALLINT	Foreign Key to address table. A unique identification number for the customer's address.
	<i>activebool</i>	BOOLEAN	false = customer is no longer active, true= customer is actively renting or purchasing the films. By default, all the records have been set to "true"
	<i>create_date</i>	DATE	The date when customer's account was created on.
	<i>last_update</i>	TIMESTAMP (6)	Date and time when the <i>customer</i> table was updated at. Formatted as (YYYY-MM-DD HH:mm:ss). Does not include the time zone. It shows the same time for all records.
	<i>active</i>	INTEGER	0 = inactive, customer is no longer active, 1= active, customer is actively renting or purchasing the films. Default=1

2-9. Language Dimension Table

Table	Column	Data Type	Description
<i>Language</i> <u>Dimension</u>	<i>language_id</i>	SERIAL	Primary Key (Surrogate Key) , Identity auto increment column for the language records.
	<i>name</i>	CHARATER VARYING (20)	Name of the language. Must not exceed 20 characters.
	<i>last_update</i>	TIMESTAMP (6)	Date and time when the <i>language</i> table was updated at. Formatted as (YYYY-MM-DD HH:mm:ss). Does not include the time zone. It shows the same time for all records.

2-10. Film_actor Dimension Table

Table	Column	Data Type	Description
Film_actor <u>Dimension</u>	<i>actor_id</i>	SMALLINT	Primary Key (Composite Key) , Identity auto increment column for the actor records.
	<i>film_id</i>	SMALLINT	Primary Key (Composite Key) , Identity auto increment column for the film records.
	<i>last_update</i>	TIMESTAMP (6)	Date and time when the <i>film_actor</i> table was updated at. Formatted as (YYYY-MM-DD HH:mm:ss). Does not include the time zone. It shows the same time for all records.

2-11. Film_category Dimension Table

Table	Column	Data Type	Description
Film_category <u>Dimension</u>	<i>film_id</i>	SMALLINT	Primary Key (Composite Key) , Identity auto increment column for the film records.
	<i>category_id</i>	SMALLINT	Primary Key (Composite Key) , Identity auto increment column for the category records.
	<i>last_update</i>	TIMESTAMP (6)	Date and time when the <i>film_category</i> table was updated at. Formatted as (YYYY-MM-DD HH:mm:ss). Does not include the time zone. It shows the same time for all records.

2-12. Inventory Dimension Table

Table	Column	Data Type	Description
Inventory <u>Dimension</u>	<i>inventory_id</i>	SERIAL	Primary Key (Surrogate Key) , Identity auto increment column for the inventory records.
	<i>film_id</i>	SMALLINT	Foreign Key to <i>film</i> table. A unique identification number for the film
	<i>store_id</i>	SMALLINT	Foreign Key to <i>store</i> table. A unique identification number for the store
	<i>last_update</i>	TIMESTAMP (6)	Date and time when the <i>inventory</i> table was updated at. Formatted as (YYYY-MM-DD HH:mm:ss). Does not include the time zone. It shows the same time for all records.

2-13. Payment Fact Table

Table	Column	Data Type	Description
<i>Payment</i> <u>Fact</u>	<i>payment_id</i>	SERIAL	Primary Key (Surrogate Key) , Identity auto increment column for the payment records.
	<i>customer_id</i>	SMALLINT	Foreign Key to <i>customer</i> table. A unique identification number for the customer
	<i>staff_id</i>	SMALLINT	Foreign Key to <i>staff</i> table. A unique identification number for the staff
	<i>rental_id</i>	INTEGER	Foreign Key to <i>rental</i> table. A unique identification number for the rental
	<i>amount</i>	NUMERIC (5,2)	Amount of the payment with two decimal numbers
	<i>payment_date</i>	TIMESTAMP (6)	Date and time when the <i>payment</i> table was updated at. Formatted as (YYYY-MM-DD HH:mm:ss). Does not include the time zone. It shows the same time for all records.

2-14. Store Dimension Table

Table	Column	Data Type	Description
<i>Store</i> <u>Dimension</u>	<i>store_id</i>	SERIAL	Primary Key (Surrogate Key) , Identity auto increment column for the store records.
	<i>manager_staff_id</i>	SMALLINT	Unique identification number of the store manager. This can be a foreign key to <i>staff</i> table.
	<i>address_id</i>	SMALLINT	Foreign Key to address table. A unique identification number for the store address.
	<i>last_update</i>	TIMESTAMP (6)	Date and time when the <i>store</i> table was updated at. Formatted as (YYYY-MM-DD HH:mm:ss). Does not include the time zone. It shows the same time for all records.

2-15. Staff Dimension Table

Table	Column	Data Type	Description
<i>Staff</i> <u>Dimension</u>	<i>staff_id</i>	SERIAL	Primary Key (Surrogate Key) , Identity auto increment column for the staff records.
	<i>first_name</i>	CHARACTER VARYING (45)	First name of the staff. Must not exceed 45 characters.
	<i>last_name</i>	CHARACTER VARYING (45)	Last name of the staff. Must not exceed 45 characters.
	<i>address_id</i>	SMALLINT	Foreign Key to <i>address</i> table. A unique identification number for the employee's address.
	<i>email</i>	CHARACTER VARIYING (50)	Email address of the staff. Must not exceed 50 characters.
	<i>store_id</i>	SMALLINT	Foreign Key to <i>store</i> table. A unique identification number of the store which the staff works for.
	<i>active</i>	BOOLEAN	false = staff is no longer active, true= staff is actively working at the company. By default, all the records have been set to "true"
	<i>username</i>	CHARACTER VARIYING (16)	Username that a staff can log into the company's system
	<i>password</i>	CHARACTER VARIYING (40)	Password of the staff which matches their username to log into the system
	<i>last_update</i>	TIMESTAMP (6)	Date and time when the <i>customer</i> table was updated at. Formatted as (YYYY-MM-DD HH:mm:ss). Does not include the time zone. It shows the same time for all records.
	<i>picture</i>	BYTEA	Personnel picture of the employee in Binary format
